Among the various plugins I use, I have the Waves Platinum TDM bundle and a few other individual Waves plugins. Waves just sent me an email pushing their Waves Update Plan.

Those of you that use Waves plugins, what is the advantage or benefit of this expense? They also sent me an email advising me that I can purchase the V-series plugins for 50% off if I am an Update Plan member. But aside from discount specials on yet more purchases like this, what do you really get for the money spent?

Thanks,

-Andres

Waves just re-did their update plan and made the pricing a little more friendly.

WUP gets you tech support, free updates that may apply to your bundle (for example Mercury bundle users got the L316, L3LL, and API plugs for free), compatibility updates (OS formats, plug formats), special upgrade offers and pricing.

More details here:
